Packaging Machinery Servicing (Diploma) (D50360)

The State Board of Community Colleges is asked to archive the Packaging Machinery Servicing (Diploma) (D50360) curriculum program.

Currently, there are no colleges approved to offer Packaging Machinery. Packaging has transitioned from a mechanical into an electro-mechanical process-control industry and is now supported by mechatronics-based production architecture.

The new Mechatronics Engineering Technology (A40350) curriculum program may be considered a replacement curriculum program for Packaging Machinery (Diploma) (D50360). Colleges interested in providing an educational program for packaging machinery can better align with current industry skill requirements by offering the Mechatronics Engineering Technology program.
